

NEW Actuator for FlowCon PICV *SM.0.0.1.x range*

- **100% authority**, fully pressure independent
- Wider flow range with finer step division
(100 unique flow rates)
- **Multiple control modes**:
linear flow, EQ%, and linear rotation
- **Settable control signal**
- Build-in **failure actions** on lost supply
voltage and control signal
- Adjustable auto-stroke frequency
- **Programming port** for
firmware updates
- Lower weight and less
operating power consumption
- **BACnet** and **failsafe** options
available

NEW Actuator for FlowCon PICV *SM.0.0.1.x range*

With the new SM.0.0.1.x actuators we say: **Welcome to the SAME, but MORE.** You will of course keep all the well-known benefits of the current FlowCon SM PICV range. But the new SM-actuator range will give you added features and take precision control a leap forward.

The new SM.0.0.1.x actuators introduce a wider flow range with 100 finely settable steps, giving customers more precise control and flexibility. The actuators offer enhanced reliability with configurable responses to both control signal and power failures, including failsafe options that address market requests from critical applications like data centers.

A lighter, optimized actuator design with integrated programming port and updated wiring makes on-site installation, servicing, and firmware upgrades simpler and more efficient. Together, these technical improvements translate into stronger customer value, easier commissioning, and a clear competitive edge in positioning FlowCon solutions in the HVAC market.
